

CISC 2305

Programming Assignment 7 (20 Pts)

Due at 10:00 PM Central (MyCampus)

Topics: C# Programming control statements and methods

In this program, you are to write a program that takes a numerical value (make sure the value is between 1 and 12 inclusive) and print out the equivalent month. For instance, if the value is 1, you print out January. The program must provide a menu driven choice for the user and have at least two methods. The first method should consist of **if...else** and the second method should consist the **switch** that accomplishes the same task as first. The menu should look something like this:

Please choose from the following menu to proceed:

```
1*****If...else
2*****Switch
```

Depending on the choice, your program should then call the appropriate method (MyIfElse or MySwitch)
