

CISC 2330 – Spring 2013

Assignment 13 (20 Pts)

Due Date: Friday, April 26, 2013 at 10:00 PM Central (MyCampus)

Topics: C# Arrays:

My CISC 2330 has just taken test two and just for fun of it, I want to know how many even grades (out of the 7 scores) were there and also know the average of only even grades. You are to solve this problem using arrays with the following specs:

1. Create a one dimensional array to store the list of grades. Feel free to populate the array with arbitrary grades of your choice (or use the sample below).
2. Traverse (using a loop) the array and display only the even grades. Then display the average of the even grades. For example, if the scores were 90, 33, 80, 90, 77, 80, 51, then your program should display something like:

Even grades:

=====

90
80
90
80

Average is 85
