

## **CISC 3321**

### **Programming Assignment 2 (20 Pts)**

**Due at 10:00 PM Central (MyCampus)**

This assignment tests your understanding of classes and methods.

Modify the Account Class in lecture 4 notes as followed:

- Provide a method called Debit that withdraws money from the account
- In your program, ensure that the debit amount doesn't exceed the balance. If this happens, the balance should not be changed and the method should display a message indicating that the balance is exceeded.
- You will probably want to modify the AccountTest (also in the lecture) to test the new method.
